Introduction

Veterinarians are well recognized by the public (both organizations and individuals) as the experts and leaders in the humane care of animals. The public, and the profession, expect veterinarians to model responsible and appropriate animal handling and restraint in all circumstances. The public trusts veterinarians, and looks to the profession for compassionate care and welfare advice in all animal species.

The promotion and protection of animal health and welfare are encompassed in the fundamental commitments outlined in the Veterinarians Oath, and are the foundation of the profession’s ethos. The Oath, outlined below, emphasizes elements inherent to a veterinarian’s responsibility in animal handling and restraint:

"As a member of the veterinary medical profession, I solemnly swear that I will use my scientific knowledge and skills for the benefit of society.

I will strive to promote animal health and welfare, prevent and relieve animal suffering, protect the health of the public and the environment, and advance comparative medical knowledge.

I will perform my professional duties conscientiously, with dignity, and in keeping with the principles of veterinary medical ethics."
I will strive continuously to improve my professional knowledge and competence and to maintain the highest professional and ethical standards for myself and the profession.”

Often the challenge with the provision of veterinary care is the public’s emotional reaction to methods of handling and restraint that are humane and actually necessary to ensure a safe outcome for all involved in the care of the animal. The method of humane handling and restraint of an animal by a veterinarian varies across species, and is influenced by a diverse number of contexts and circumstances. Regardless of context, and in addition to the Veterinarian’s Oath, a veterinarian should be guided by the Five Freedoms, first described by the Farm Animal Welfare Council of the UK and now embedded in internationally accepted practices as a set of freedoms that, at minimum, should be considered in the care and handling of all animals. The Five Freedoms include:

- Freedom from hunger and thirst
- Freedom from pain, injury and disease
- Freedom from distress
- Freedom from discomfort
- Freedom to express behaviours that promote well-being

This Professional Practice Standard embraces the Veterinarian’s Oath, and supports the basis of the Five Freedoms, as it outlines the practice expectations of a veterinarian in the handling and restraint of any animal of any species. It also confirms that any behaviour inconsistent with the Standard would constitute profession misconduct.

**Definitions**

**Handling:** The manner of treating or dealing with an animal in order to interact with or control their actions. Handling, which requires knowledge of the normal behaviour of an animal, particularly an animal that may be stressed or fearful, can include physical contact, as well as auditory, visual and olfactory cues and may involve use of physical barriers (e.g. gates) to properly direct animal movement.

**Restraint:** The use of manual, mechanical, or pharmaceutical modalities to limit some or all of an animal’s normal voluntary movement.¹

---

Practice Expectations

A veterinarian meets the Professional Practice Standard: Humane Animal Handling and Restraint when the veterinarian:

1. Understands and recognizes normal behaviour and triggers for pain, fear, anxiety, aggression, and/or stress in a particular animal or species treated under his or her scope of practice.

2. Understands and utilizes current, evidence-informed knowledge of responsible animal handling and/or restraint techniques, that are relevant to his or her scope of practice.

3. Utilizes techniques and/or equipment that prevent or minimize pain, fear, anxiety, aggression, and/or stress in an animal for the service provided.

4. Considers whether it is necessary to handle and/or restrain an animal for any interaction or procedure, and only utilizes the degree of handling and/or restraint directly proportional to the specific context.

5. Supports the physical and emotional health and wellbeing of the animal, and the safety of the animal, veterinarian, veterinary team, and other individuals present, when selecting a method of handling and/or restraint for a specific circumstance.

6. Assesses and monitors an animal’s capacity for pain, fear, anxiety, aggression, and/or stress through its behaviour, inclusive of its reaction to its environment (both physical and social), to ensure effective health and welfare outcomes.

7. Recognizes when an animal’s state of arousal requires modification to the chosen approach and adjusts the approach, including plans for future encounters, accordingly. A plan for future encounters is recorded in the medical record and communicated to the veterinary team and the owner.

8. Informs and educates an existing or a potential client about the humane handling of and/or restraint required for examination and/or treatment of a specific animal, as appropriate and necessary to ensure a positive animal health and welfare outcome.

9. Understands his/her own limitations in the handling and restraint of an animal within the specific context and, where appropriate, refers an animal to another veterinarian and/or terminates a VCPR in accordance with College standards.

College publications contain practice parameters and standards which should be considered by all Ontario veterinarians in the care of their patients and in the practice of the profession. College publications are developed in consultation with the profession and describe current professional expectations. It is important to note that these College publications may be used by the College or other bodies in determining whether appropriate standards of practice and professional responsibilities have been maintained. The College encourages you to refer to the website (www.cvo.org) to ensure you are referring to the most recent version of any document.
