PROFESSIONAL PRACTICE STANDARD

Prescribing Drugs

Introduction

Under the Veterinarians Act and Regulations, veterinarians licensed by the College of Veterinarians of Ontario are authorized to prescribe drugs. Prescribing drugs is an important component of the practice of most veterinarians and one that requires appropriate knowledge and skill, and the use of professional judgment.

The professional activity of prescribing is informed and regulated by a broad legislative framework: the Controlled Drugs and Substances Act, Narcotic Control Regulations, Benzodiazepine and other Targeted Substances Regulations, the Drug and Pharmacies Regulation Act, the Drug Interchangeability and Dispensing Fee Act, the Food and Drugs Act and Regulations, the Feeds Act and Regulations and the Veterinarians Act and the regulations thereunder. This legislation sets out the requirements for the prescribing, sale, and dispensing of drugs. The College Professional Practice Standard: Management and Disposal of Controlled Drugs and Professional Practice Standard: Use of Compounded Products in Veterinary Practice also describe specific expectations in the prescribing of controlled drugs and compounded products, respectively.

Definitions

Drug
As per the Drug and Pharmacies Regulation Act, drug means any substance or preparation containing any substance (a) manufactured, sold or represented for use in (i) the diagnosis, treatment, mitigation or prevention of a disease, disorder, abnormal physical or mental state or the symptoms thereof, in humans, animals or fowl, or (ii) restoring, correcting or modifying functions in humans, animals or fowl, (b) referred to in Schedule I, II, or III, (c) listed in a publication named by the regulations made under the Drug and Pharmacies Regulation Act, or (d) named in the regulations made under the Drug and Pharmacies Regulation Act.
Extra-Label Drug Use
Extra-label drug use (ELDU), often termed “off-label use”, refers to the actual or intended use of any drug, whether it is a prescription or an over-the-counter (OTC) drug, in an animal in a manner that is not in accordance with the label or the package insert of the drug approved by Health Canada. This includes the use of all drugs (including unapproved bulk pharmaceutical substances and compounded drugs) that do not have a Canadian approved label.  

Prescribing
The act of prescribing is a direction from a veterinarian authorizing the dispensing of a drug or mixture of drugs to a client for a specified animal or group of animals.  

Prescription
A prescription is an evidence based or informed order by a veterinarian directing that a specific animal patient or group of animals, be administered a specified drug, via an appropriate route of administration, in a defined dosage for a limited time in order to treat or prevent an identified disease.  

Withholding Time
Withholding time means, in reference to a food producing animal that receives a drug or substance, the period of time for which the animals or the product of the animal should be withheld or withdrawn from sale for consumption.  

Practice Expectations
A veterinarian meets the Professional Practice Standard: Prescribing when the veterinarian:

1. Recognizes the inherent conflict of interest in both prescribing and dispensing a drug and takes steps to mitigate this conflict, respecting the best interests of the client and of the animal or group of animals, in these activities.

2. Prescribes only those drugs that have been approved for sale by Health Canada. Applications for the prescription and use of unapproved drugs (Investigational New Drug, Emergency Drug Release, or Experimental Studies Certificate) can be made to Health Canada.  

3. Prescribes drugs only from an accredited veterinary facility in which the veterinarian practices veterinary medicine.  

4. (a) Prescribes a drug within the context of a Veterinarian-Client-Patient-Relationship (VCPR) where the veterinarian:
   - Has been retained by the owner of the animal(s), groups of companion animals, or herd(s), an authorized representative of the owner, or an individual who the veterinarian reasonably determines is acting in the interest of the animal;
   - Has advised the client that the veterinarian will only provide services in accordance with the standards of practice of the profession;

---

1. CVMA Guidelines for the legitimate use of Compounded Drugs in Veterinary Practice
2. Veterinarians Act, R.R.O. 1990, Reg. 1093, s. 23 (1).
3. Unless one of the exceptions to the requirement for a VCPR apply, inclusive of section 18(3) of Regulation 1093.
• Has reached an agreement with the client as to the scope of the services to be provided by the veterinarian; and
• Has obtained the consent of the client for each service to be provided.

(b) Understands that additional requirements of a VCPR for prescribing drugs are that the veterinarian:

• has sufficient knowledge of the animal or group of animals by virtue of a history and inquiry and either physical examination of the animal or group of animals or medically appropriate and timely visits to the premises where the animal or group of animals is kept to reach at least a general or preliminary diagnosis;
• believes that the drug is prophylactically or therapeutically indicated for the animal or group of animals; and
• is readily available in case of adverse reactions to the drug or failure of the regimen of therapy.4

5. Prescribes controlled substances only when the animal is under his or her professional treatment and the controlled substance is required for a condition for which the animal is receiving treatment from the veterinarian.

6. Prescribes drugs for use in livestock in a manner consistent with the Food and Drugs Act and Food and Drug Regulations, and the Feeds Act and Feeds Regulations.

7. Provides a written prescription for a prescribed drug when requested by a client, unless the client requests that an oral prescription be provided.

8. Includes the following information on a written, signed prescription:

• Name, strength and quantity of the drug.
• Name and address of the veterinarian.
• Identity of the animal or group of animals for which the drug is prescribed.
• Name of the client.
• Prescribed directions for use (dose, route of administration, frequency, and duration).
• Date the prescription is issued, including the day, month and year.
• Withholding times, if the prescription is for a food-producing animal.
• Number of refills permitted, if any.
• Veterinarian’s licence number issued by the College.

9. For further clarity, the following information is also required for prescriptions regarding medically important antimicrobials5 to be administered via feed:

• Animal production type
• Weight or age
• Type of feed

---

4 In accordance with the College’s policy on After Hours Care.
5 Medically important antimicrobials are defined as those in categories I, II, and III with respect to the Health Canada categorization of medically important antimicrobials.
• Total amount of feed or feeding period
• Amount of drug used per tonne
• Manufacturing instructions
• Cautions
• CgFARAD # if applicable

10. Provides an oral prescription when requested by a client, to an individual acceptable to the client, who is either a veterinarian licensed by the College, a pharmacist, or a veterinarian practising outside of Ontario.  

11. Maintains appropriate security of prescription forms to mitigate against misuse or theft.

12. Does not sign a blank or incomplete prescription form.

13. Advises the client of appropriate withholding times when prescribing drugs for use in food-producing animals, which shall be at least as long as the withholding time recommended by the manufacturer of the drug or substance. Appropriate withholding time(s) must be included in the prescription. In instances where the withholding time is not known, makes every effort to establish an appropriate withholding time. The Canadian Global Food Animal Residue Avoidance Database (www.cgfarad.usask.ca) should be consulted for its recommended residue avoidance information when drugs are used in an extra-label manner (compounding of drugs, species not on label, etc.).

14. Refers to the Decision Cascade published by the Canadian Veterinary Medical Association when making prescribing decisions, and, when appropriate, the Health Canada Categorization of Antimicrobial Drugs Based on their Importance in Human Medicine.

15. Prescribes drugs in an extra-label manner that is consistent with Health Canada's Policy on Extra-Label Drug Use in Food Producing Animals and the Canadian Veterinary Medical Association’s Position Statement on Extra-Label Drug Use (ELDU).

16. Prescribes compounded drugs in a manner consistent with the College’s Professional Practice Standard: Use of Compounded Products in Veterinary Practice. Only prescribes products compounded from an active pharmaceutical ingredient (API) if other options in the Canadian Veterinary Medical Association Decision Cascade are not available or appropriate.

17. Prescribes antimicrobials in a manner consistent with the principles of good stewardship and the judicious use of antimicrobials that sustains the clinical efficacy of antimicrobials by optimizing drug use, choice, dosing, duration, and route of administration, while minimizing the emergence of resistance and other adverse effects. Records a diagnosis or purpose for the use of any antimicrobials.

18. Informs a client of the common side effects and any serious risks associated with the administration of a prescribed drug used in either a label or extra-label manner. Informs the client of the proper storage and handling of a prescribed drug.

19. Charges a reasonable fee, if any, for the provision of a written or oral prescription.
